# RECHARGE REACTOR

**R**echarge Reactor is the foundation for several of our upcoming features, allowing us to leverage the passive yield feature into a powerful, dynamic pool. Rather than lose tokens to a blackhole, the reactor can, by community vote, direct the immense yield into multiple contracts to create profitable new uses or entice liquidity to new markets and blockchains as we continue to improve our accessibility across different platforms.

Community developers can implement their own contracts and connect them to the reactor, instantly supplying them with R3FI rewards to redistribute within their contract.

The reactor is powered by and distributes R3FI tokens, the governance and reward token of the Recharge ecosystem. You can mint RCORE by feeding the reactor R3FI tokens, representing your share of R3FI tokens locked within. You can freely trade or even stake your RCORE tokens, you can also burn them to recover the underlying R3FI tokens.

This gives you the possibility to contribute to Recharge's growth with no risk as your R3FI is instantly available if needed, it also adds a new market to the ecosystem as you can continue to use or trade RCORE on DEXs.

## R3FI

The Reactor runs on R3FI, you can choose to fuel it by swapping your R3FI for RCORE, a new token with its own benefits, that represents your shares within the reactor.

The more R3FI tokens locked into the reactor, the higher the output yield powering the Recharge ecosystem.

## RCORE

A 1:1 representation of your share of R3FI within the reactor. RCORE is created or burnt whenever R3FI is added or removed.

RCORE allows you to participate in boosting the underlying yield of the platform while retaining ownership of your R3FI tokens.

# TOKENOMICS

**RCORE is a 1:1 representation of the R3FI token locked within the reactor.**

It allows you to contribute to the ecosystem while retaining possession of your R3FI tokens and offers you an alternate reward mechanism to counter the loss of passive yield from your R3FI tokens fueling the reactor core.

One of the first benefits for RCORE holders will be rewards from our upcoming EarnLP feature. Our take on a sustainable and rewarding alternative to restrictive autoLP features. **Instead of “burning” LP tokens, they will be locked up and gradually released to RCORE stakers.**

LP tokens awarded to RCORE stakers can then be staked within our LP reward pools to provide a constantly growing reward for token holders.

By swapping part of your R3FI into RCORE, you are helping build the future Recharge ecosystem while retaining full ownership of your tokens and receiving an alternate source of rewards.

**RCORE  
the  
perfect  
compliment to  
R3FI.**

- **1:1 backed by R3FI tokens.**
- Each reactor can only issue 1,000,000 RCORE.
- **No lock-in**, convert to and from RCORE at anytime.
- RCORE does not earn passive yield rewards but can be staked/traded as any other ERC20 token.
- Each blockchain will run its own reactor and supply of RCORE (1:1 to R3FI, **there will only ever be 5 million R3FI/RCORE in circulation across all blockchains**).
- **RCORE does not replace R3FI but allows holders to receive rewards from different sources.**
